

Making Buildings

That Make Our Builders The Best.

Churches/Community

Metal building systems have become quite popular in the church and community markets due to their flexibility in design and price. Metal building usage for churches and auxiliary structures provide low-maintenance and low-cost facilities.

MESCO metal buildings allow diversification in design and appearance from basic metal wall panels to systems that use sweeping expanses of glass, brick, stone or pre-cast concrete. Unique metal building designs of the religious sector reflect and complement the surrounding communities and allow for growth with easy removal of endwalls or sidewalls, erection of new framework, and the addition of matching wall and roof panels.

Merging flexibility, reasonable costs, faster occupancy, cost-effective maintenance and long-term energy savings creates powerful choices in competitive markets. MESCO prides itself on offering the following features for all church and community facilities:

- Aesthetically pleasing appearance
- Standard and custom design options
- Fast and economical construction
- Ease of expansion
- Ongoing durability
- Reduced maintenance costs
- Long-term energy savings
